tatistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CDS
                                                                                                                                                                                                                                     The property of the property o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                identified by repeatmasker (Arian Smit, Arian Smit, Sepanan Smit, Spename, Washington, edu/RM/Repeatmasker.html). Regions of genomic sequence that are not annotated as genes but have predicted exons by GRAIL are annotated as misc features.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /translation="KLMSINEKRSLGTIWSPANVCCVQFSSYSNHLLAFGSADYKVYC

Borago officinalis.
                                                                                                                                                                                                                                                                                                                                                                  Transgenic plants comprising the borage delta-6-desaturase geneshow increased production of gamma linolenic acid and having increased resistance to chilling claim 2; Page 51-52, 75pp; English.

A DNA clone (T30395) codes for borage delta-6-desaturase (R98455), which catalyses the conversion of linoleic acid to gamma-linolenic acid (GLA). It was isolated from a borage membrane-bound polysomal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       library using probes based on abundantly expressed seed storage protein cDNAs and with an isolated partial cDNA clone. The gene can be incorporated into a vector, pref. incorporating a tissue-specific promoter, for the expression of delta-6-desaturase in transgenic plants, esp. sunflower, soybean, maize, tobacco, peant, carrot or oilseed rape, resulting in increased GLA prodn. Alteration of plant lipids may also lead to improved chilling resistance.
                                                                                                                                                                                                                                                                                                                 Thomas TL;
                                                                                                                                                                                                                                                                                         (RHON ) RHONE POULENC AGROCHIMIE.

Random point mutations were introduced into the alpha fragment or E. coli beta-galactosidase. The wild type sequence was obtained as single stranded template and an oligonucleotide was hybridised to to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3 ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can hamplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of wh.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            108 Others;

by prepn of single stranded template, annealing a primer, elongation,
misincorporation, completion of molecules and screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; p; English.

Random point mutations were introduced into the alpha fragment of Bandom point mutations were introduced into the alpha fragment of E. coli beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Oligonucleotide probe MK14'A consists of nucleotides 5-95 of (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

This generic formula can be represented as follows: X(TCC)(NNB) 10-

(TCC)(NNB) 52 (NNB) 2(TCC)(NNB) 14 TCC) x and x are flanking restriction

sites (x is not the same as Y) that are not specified further. This

squence generates peptides that are cloverlast in structure. Other

generic sequences are shown in 070465-68. Other specific peptides

generic sequences are shown in 070465-68. Other specific peptides

concattenated by these generic sequences are shown in R6150-54. Tasks are

concattenated heterofunctional proteins or peptides, comprising at least

two functional regions - a binding domain with affinity for a ligand and

a second effector peptide portion that is chemically or biologically

cative They may further comprise a linker peptide between the 2 domains.

The oligonucleotides are also designed so that the expressed peptide

contains 2 or 4 cysteine residues positioned in, or flanking, the

conformational rigidity to the peptides. The TSARs or compsns. comprising

a TSAR binding domain can be used in vivo to deliver a chemically or

                                                                                                                                                                                                                                                                                                                                                              a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain bisclosure; Page 35; 255pp; English.

Q70468 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides This generic formula can also be represented as follows: X(NNB)1(TGC) (NNB)2(2(NNB)7(TGC)(NNB)10Y: X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in Q70466-68.
                       Q70469 is a generic DNA sequence used to generate random TSAR peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Generic DNA sequence to generate a random TSAR petide library. TSAR; totally synthetic affinity reagent; synthetic; binding domain; effector domain; concateneated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.

Other specific peptides generated by these generic sequences are shown in R65151-54. TSARs are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with affainty for a ligand and a second effector peptide portion that is chanically or biologically active. They may further comprise a linker peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs confers on compens. comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. cell. They can also replace the function of macromolecules, eg. conduction. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Thentifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comportising a binding domain and an effector domain comportising a binding domain and an effector domain or screening a binding domain and an effector domain or bisclosure; Page 35; 255pp; English.

O70465 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)6/TGC)(NNB)112(NNB)14/TGC)(NNB)3Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in Q70466-68. Other specifies generated by these generic sequences are shown in R65151-54. TSARs are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with a finity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The oligonuclectides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               62 TAAGAAGTATATCACGGCGGAGGACCTCCGCCGCCACAACAAGTCCGGCGATCTCTGGAT 121

Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain broteins a generic base sold sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)4(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NNB)8(CAC)(NN
in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs or compsns. comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active molety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the moleculary can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody activity allowing direct and rapid detection in a screening process. Sequence 114 BP, 0 A; 2 C; 2 G; 2 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        070470;

Tidentifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins

PT comprising a binding domain and an effector domain

Disclosure; Page 35; 255pp; English.

COMPACT is a generic DNA Sequence used to generate random TSAR (Totally Disclosure; Page 35; 255pp; English.

COMPACT is a generic DNA Sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) Peptides. This generic formula can also be represented as follows: X(NNB)16(TGC)(NNB)16(TGC)(NNB)18; X

COMPACT SPECIFIC PEPTIDES (TAIS) FOR COMPACT (NNB)18; X

COMPACT SPECIFIC PEPTIDES GENERATE SEQUENCES are shown in R65151-54. TSARS are concatenated by these generic sequences are shown in R65151-54. TSARS are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the umpredicted or variant residues. Therefore residues confer some degree of conformational rigidity to the peptides. The TSARs or compans. Comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the conformational antibodies and therefore circumvent the need for monoclonal or polyclonal antibodies and therefore circumvent the need for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

CQ70472 is a generic DNA Sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)!(CAC)(NNB)!(CAC)(NNB)!CAC)(NNB) (CAC)(NNB) (CAC) (NNB) (
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         434 CTACGGCGTGCTGGCGTCGGAGTCCGTCGGAGTTCACATGCTCTGCGGCGCACTGCTGCTGGG 493
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 070465;
05-APR-1995 (first entry)
Generic DNA sequence to generate a random TSAR petide library.
TSAR: totally synthetic affinity reagent; synthetic; binding domain;
                                                                                                                                                                                                                                                                                                                                           Generic DNA sequence to generate a random TSAR peptide library. TSAR; totally synthetic affinity reagent; synthetic; binding domain; effector domain; concatenated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              detection in a screening process

CC (70465 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides: This generic formula can also be represented as follows: X(NNB)6(CGC)(NNB)112(NNB)14(TGC)(NNB)3Y. X and Y are flanking restriction sites (X is not the same as Y) that are constrainty further. Other specified further. Other specified further. Other specified further. Other specified proteins or peptides.

CC offer specified further. Other furtional regions - a binding domain with a first two functional regions - a binding domain with a first two functional regions - a binding domain with a first two functional regions - a binding domain with a first the expressed peptide contains 2 or 4 cysteine residues positioned in or flanking, the unpredicted or variant residues positioned in or flanking, the unpredicted or variant residues positioned in or compass. Comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ion, calliver a chemically or biologically active moiety, eg. metal ion, conformation or polyclonal antibodies and therefore circumvent the need for computer methods of hybridoma formation or in vivo antibody conformation. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Discussure; Ages 23; Aspep; Lenglish.

Off 468 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be copresented as follows: X(NNB)1(TGC)(NNB)7(TGC)(NNB)10Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in 070466-68.

Other specified further other generic sequences are shown in R65151-54. TSARs are concatenated beterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with a f65151-54. TSARs are concatenated heterofunctional proteins or peptides, comprising at least two functional regions - a binding domain with a f65151-64. TSARs are concatenated heterofunctional proteins or peptides, comprising at least two functions. They may further comprise a linker of peptide between the 2 domains. The Oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the umpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs or comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active molety, eg. metal ion, cadioisotope, peptide, toxin or enzyme, to the specific target or on the conclusion or prolyclonal antibodies and therefore circumvent the need for complex methods of hybridoma deterior or in vivo antibody conclusions of hybridoma deterior or in vivo antibody activity and allowing direct and rapid detection in a screening process.

Secuence 114 RP: 0 A Discounted and a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3 banbanbanbanbanbanbanbanbanbanbtgcanbanbanbanbanbanbanannan 62

Tdentifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins per screening a recombinant vector library expressing fusion proteins per comprising a binding domain and an effector domain bisclosure; Page 35; 255pp; English.

CY0467 is a generic DNA sequence used to generate random TSAR (Totally Disclosure, Page 35; 255pp; English.

CY0467 is a generic DNA sequence used to generate random TSAR (Totally CY0467 is a generic DNA Sequence used to generate of an also be represented as follows: X(NNB)5[GTGC)(NNB)12(NNB)16(TGC)(NNB)17. X and Y are flanking restriction sites (X is not the same as Y) that are controlled further. Other generic sequences are shown in CASISI-34. TSARS are concatenated by these generic sequences are shown in R65151-34. TSARS are concatenated by these generic sequences are shown in CASISI-34. TSARS are concatenated by these generic sequences are shown in Affinity for a ligand and a second effector peptide protein with a affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The oligonucleotides are also designed to that the expressed peptide contains 2 or 4 cysteine residues positioned in, or flanking, the unpredicted or variant residues. These residues comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ior on the complex methods of hybridoma formation of macromolecules, eg.

Cell. They can also replace the function of macromolecules, eg.

Cell. They can also replace the function of macromolecules, eg.

This generic formula can be represented as follows: X(TGC)(NNB)10-
CC (TGC)(NNB)2(TGC)(NNB)14(TGC)Y. X and Y are flanking restriction
sites (X is not the same as Y) that are not specified further. This
cstemences are shown in Q70465-68. Other specific peptides
Generated by these generic sequences are shown in R65150-54. TSARS are
concatenated heterofunctional proteins or peptides, comprising at least
two functional regions - a binding domain with affinity for a ligand and
a second effector peptide portion that is chemically or biologically
contains 2 or 4 cysteine residues positioned in, or flanking, the
contains 2 or 4 cysteine residues positioned in, or flanking, the
conformational rigidity to the peptides. The TSARs or comprising
cumpredicted or variant residues positioned in, or flanking, the
conformational rigidity to the peptides. The TSARs or comprising
conformational rigidity to the peptides. The TSARs or comprising
conformational rigidity to the peptides. The TSARs or comprising
conformational rigidity to the peptides. The TSARs or comprising
conformation of macromolecules, eg. monoclonal or polyclonal antibodies
and therefore circumvent the need for complex methods of hybridoma
conformation or in vivo antibody production. The TSARs are easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4 G;

PLANT PHYSIOL. 111:39-47(1996).

-!-FUNCTION: NITRAITE REDUCTASE IS A KEY ENZYME INVOLVED IN THE FIRST STEP OF NITRAITE ASSIMILATION IN PLANTS, FUNGI AND BACTERIA.

-!-CAPALYIC ACTIVITY: NADH + NITRAITE = NAD(+) + NITRITE + H(2)O.

-!-COFACTOR: REQUIRES FAD, A HEME GROUP (CALLED CYTOCHROME B-557)

AND ONE MOLYBDENUM ATOM.

-!-SUBUNIT: HOMODIMER (BY SIMILARITY).

-!-SUBUNIT: HOMODIMER (BY SIMILARITY).
                                                                                                                                     -!- SIMILARITY: CONTAINS A CYTOCHROME B5 FAMILY, HEME-BINDING DOMAIN.
-!- SIMILARITY: TO FAD/NAD-BINDING CYTOCHROME REDUCTASES IN THE
C-TERMINAL DOMAIN.

21. FUNCTION: CYTOCHROME B5 IS A MEMBRANE BOUND HEMOPROTEIN WHICH
CYTOCHROME B5 IS A MEMBRANE BOUND HEMOPROTEIN WHICH
FUNCTION: CYTOCHROME B5 IS A MEMBRANE BOUND
OXYGENASES. MAY PLAY A REY ROLE IN THE MODIFICATION BY
DESATURATION OF FATTY ACIDS IN THE ENDOPLASMIC RETICULUM, WHICH IN
THE DEVELOPMENTALLY REGULATED PRODUCTION OF LARGE AMOUNTS OF STORAGE
LIPIDS. IS INVOLVED IN THE REDUCTION OF CYTOCHROME P-450 AND
ANY THEREFORE BE INVOLVED IN FLAVONOID BIOSYNTHESIS AND IN THE PETALS.
C.I. SUBCELLULAR LOCATION: MICROSOMAL MEMBRANE. BOUND TO THE
CYTOPLASMIC SIDE OF THE ENDOPLASMIC RETICULUM (BY SIMILARITY).
C.I. TISSUE SPECIFICITY: IS HIGHLY EXPRESSED IN DEVELOPING SEEDS,
MODIFICATION SIDE OF THE LEAF.
CYTOPLASMIC SIDE OF THE LEAF.
C.I. TISSUE SPECIFICITY: IS HIGHLY EXPRESSED AT LOW
LEVELS IN THE LEAF.
C.I. TISSUE SPECIFICITY: THANSWERE ALT.INIT.
C.I. TISSUE SPECIFICITY: THANSWEREARS, HEME; MICROSOME; MULTIGENE FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      STEP OF NITRATE ASSIMILATION IN PLANTS, FUNGI AND BACTERIA.
-!- CATALYTIC ACTIVITY: NADH + NITRATE = NAD(+) + NITRITE + H(2)O.
-! COFACTOR: EACH SUBUNIT OF THE ENZYME CONTAINS 1 EQUIVALENT OF FAD,
-! ERME IRON, AND MOLYBDENINH-PTERIN AS PROSTHETIC GROUPS. THE HEME
GROUP IS CALLED CYTOCHROME B-557.
-! SUBUNIT: HOMODIMER.
-! TISSUE SPECIFICITY: ROOT, LEAR, AND SHOOT.
-! WHEN MUTATED CONFERS RESISTANCE TO THE HERBICIDE CHLORATE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           538 MNTTAKMYSMSE-VKKHNSADSCWIIVHGHIYDCTRFLMDHPGGSDSILINAGTDCTEEF 596

J. BIOL. CHEM. 266:23542-23547(1991).
-!- FUNCTION: NITRATE REDUCTASE IS A KEY ENIYME INVOLVED IN THE FIRST
STEP OF NITRATE ASSIMILATION IN PLANTS, FUNGI AND BACTERIA.
-!- CATALXITI ANDH + NITRATE = NAD(+) + NITRITE + H(2)O.
-!- COFACTOR: EACH SUBUNIT OF THE ENIYME CONTAINS I EQUIVALENT OF FAD,
HEME IRON, AND MOLYBDENUM PETERIN AS PROSTHETIC GROUPS. THE HEME
GROUP IS CALLED CYTOCHROME B-557.
                                                                                                                                                                                                                                                                                                                            532 MNTASKMYSMSE-VRKHNSSDSAWIIVHGHIYDASRFLKDHPGGVDSILINAGTDCTEEF 590
                                 -!- SUBUNIT: HOMODIMER.
-!- SIMILARITY: TO EUKARYOTIC MOLYBDOPTERIN OXIDOREDUCTASES IN THE
N-TERMINAL DOMAIN.
-!- SIMILARITY: CONTAINS A CYTOCHROME B5 FAMILY, HEME-BINDING DOMAIN.
-!- SIMILARITY: TO FAD/NAD-BINDING CYTOCHROME REDUCTASES IN THE
C-TERMINAL DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -:- SIMILARITY: CONTAINS A CYTOCHROME B5 FAMILY, HEME-BINDING DOMAIN.
-:- SIMILARITY: TO FAD/NAD-BINDING CYTOCHROME REDUCTASES IN THE C-TERMINAL DOMAIN.

SIMILARITY: TO FAD/NAD-BINDING CYTOCHROME REDUCTASES IN THE C-TERMINAL DOMAIN.
                                                                                                                                                                             H(2)O.

COFACTOR: EACH SUBUNIT OF THE ENZYME CONTAINS 1 EQUIVALENT OF FA
COFACTOR: EACH SUBUNIT OF THE ENZYME CONTAINS 1 EQUIVALENT OF FA
HEME IRON, AND MOLYBDENUM-PTERIN AS PROSTHETIC GROUPS. THE HEME
GROUP IS CALLED CYTOCHROME B-557.

SUBUNIT: HOMODIMER.

- INDUCTION: BY NITRATE.

- SIMILARIY: TO EUKARYOTIC MOLYBDOPTERIN OXIDOREDUCTASES IN THE
N-TERMINAL DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
